LEARNING MANAGEMENT SYSTEM

BY ASHWIN KRISHNA V

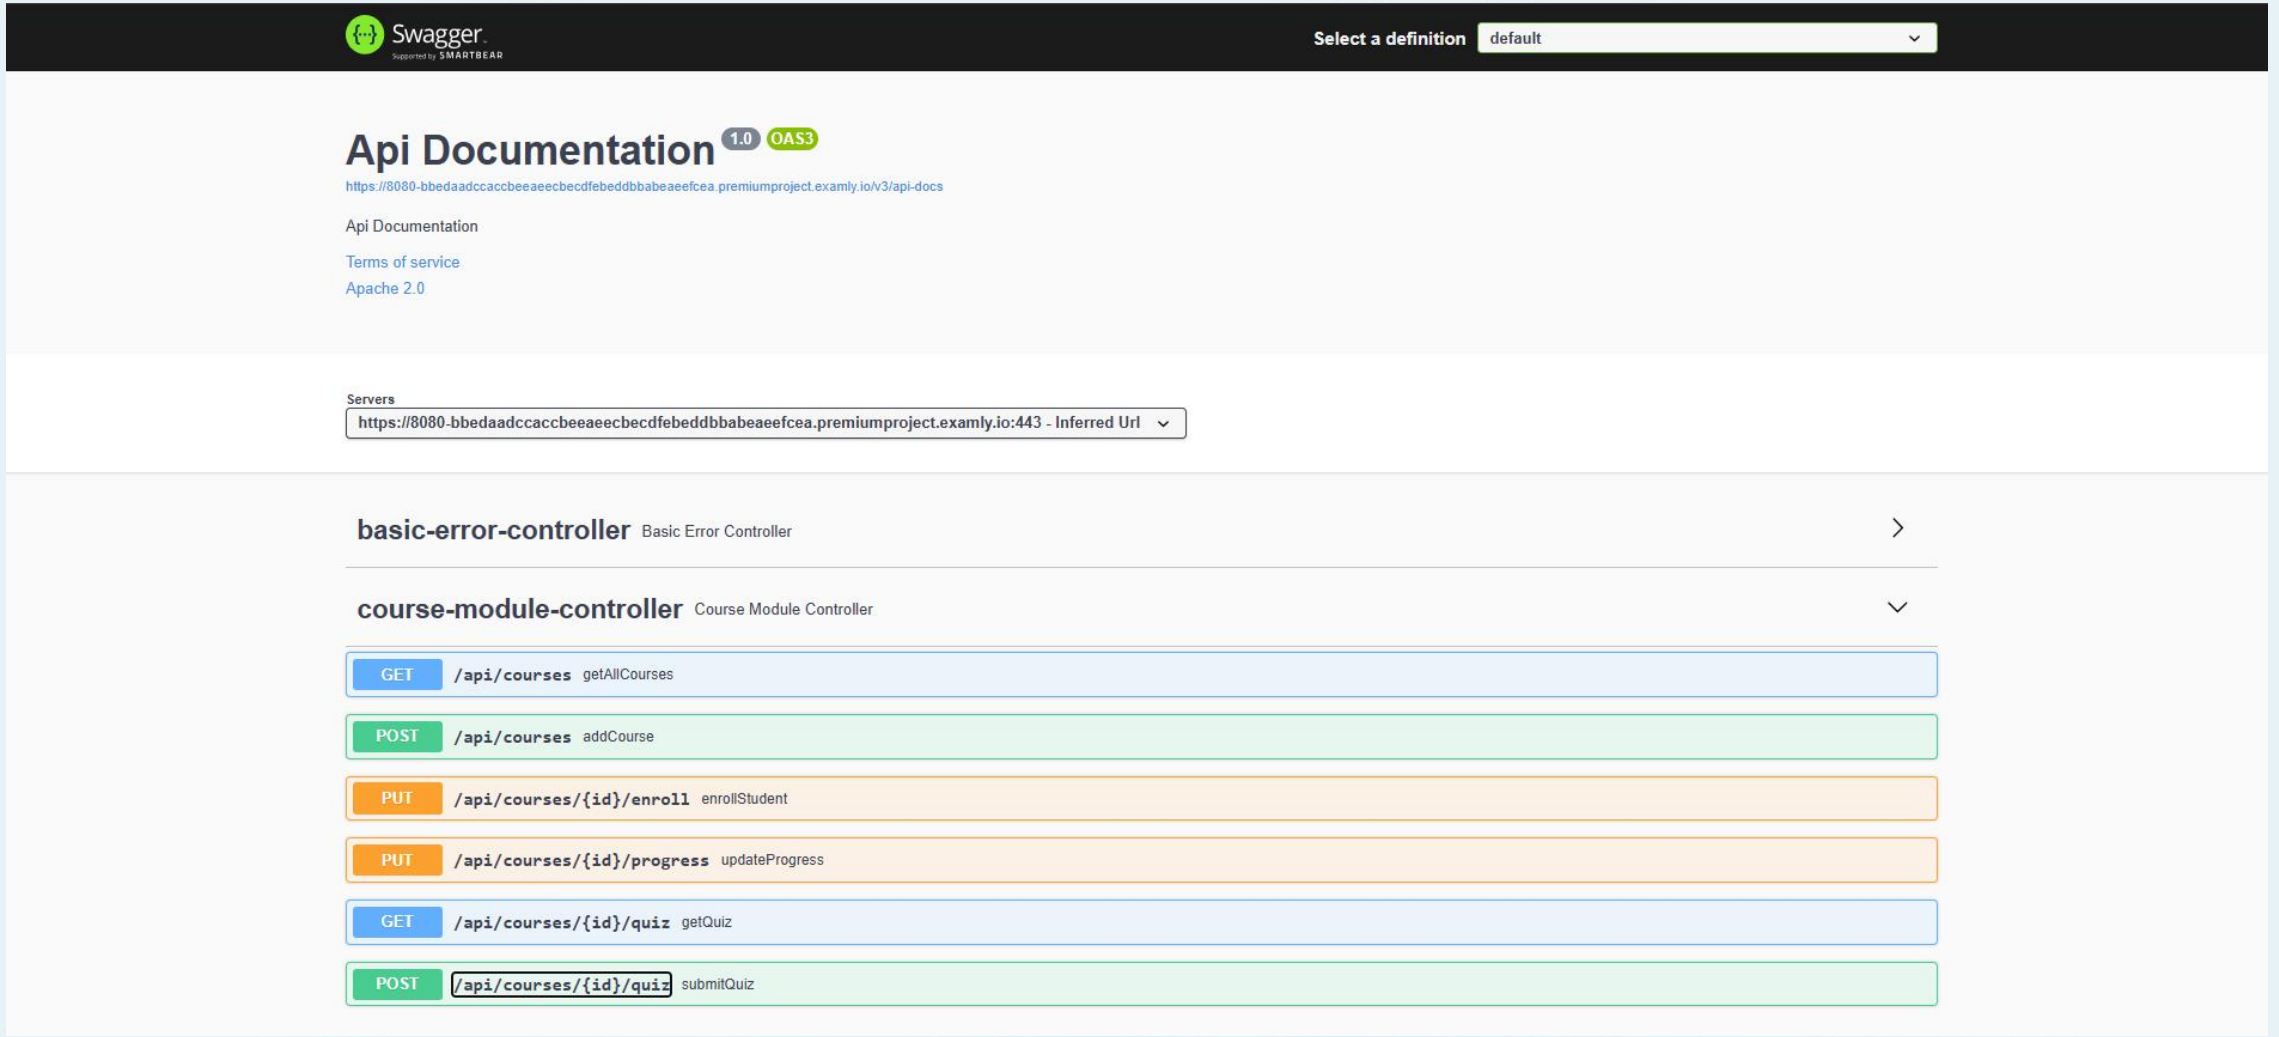

PROBLEM STATEMENT

- Create and manage courses.
- Allow students to enroll in available courses.
- Track and update student learning progress.
- Provide quiz questions for each course.
- Allow students to submit quiz answers and record scores.
- Provide REST APIs for communication between the frontend and backend.
- Store course, enrollment, progress, quiz, and score information in a database.

OBJECTIVES

- Course Management – Add and view courses.
- Course Enrollment – Students can enroll in courses.
- Progress Tracking – Students can track their learning progress.
- Quiz Management – Students can attend quizzes and submit scores.
- Data Storage – Store course, student, progress, and quiz information.
- Frontend–Backend Communication – React communicates with Spring Boot through REST APIs.

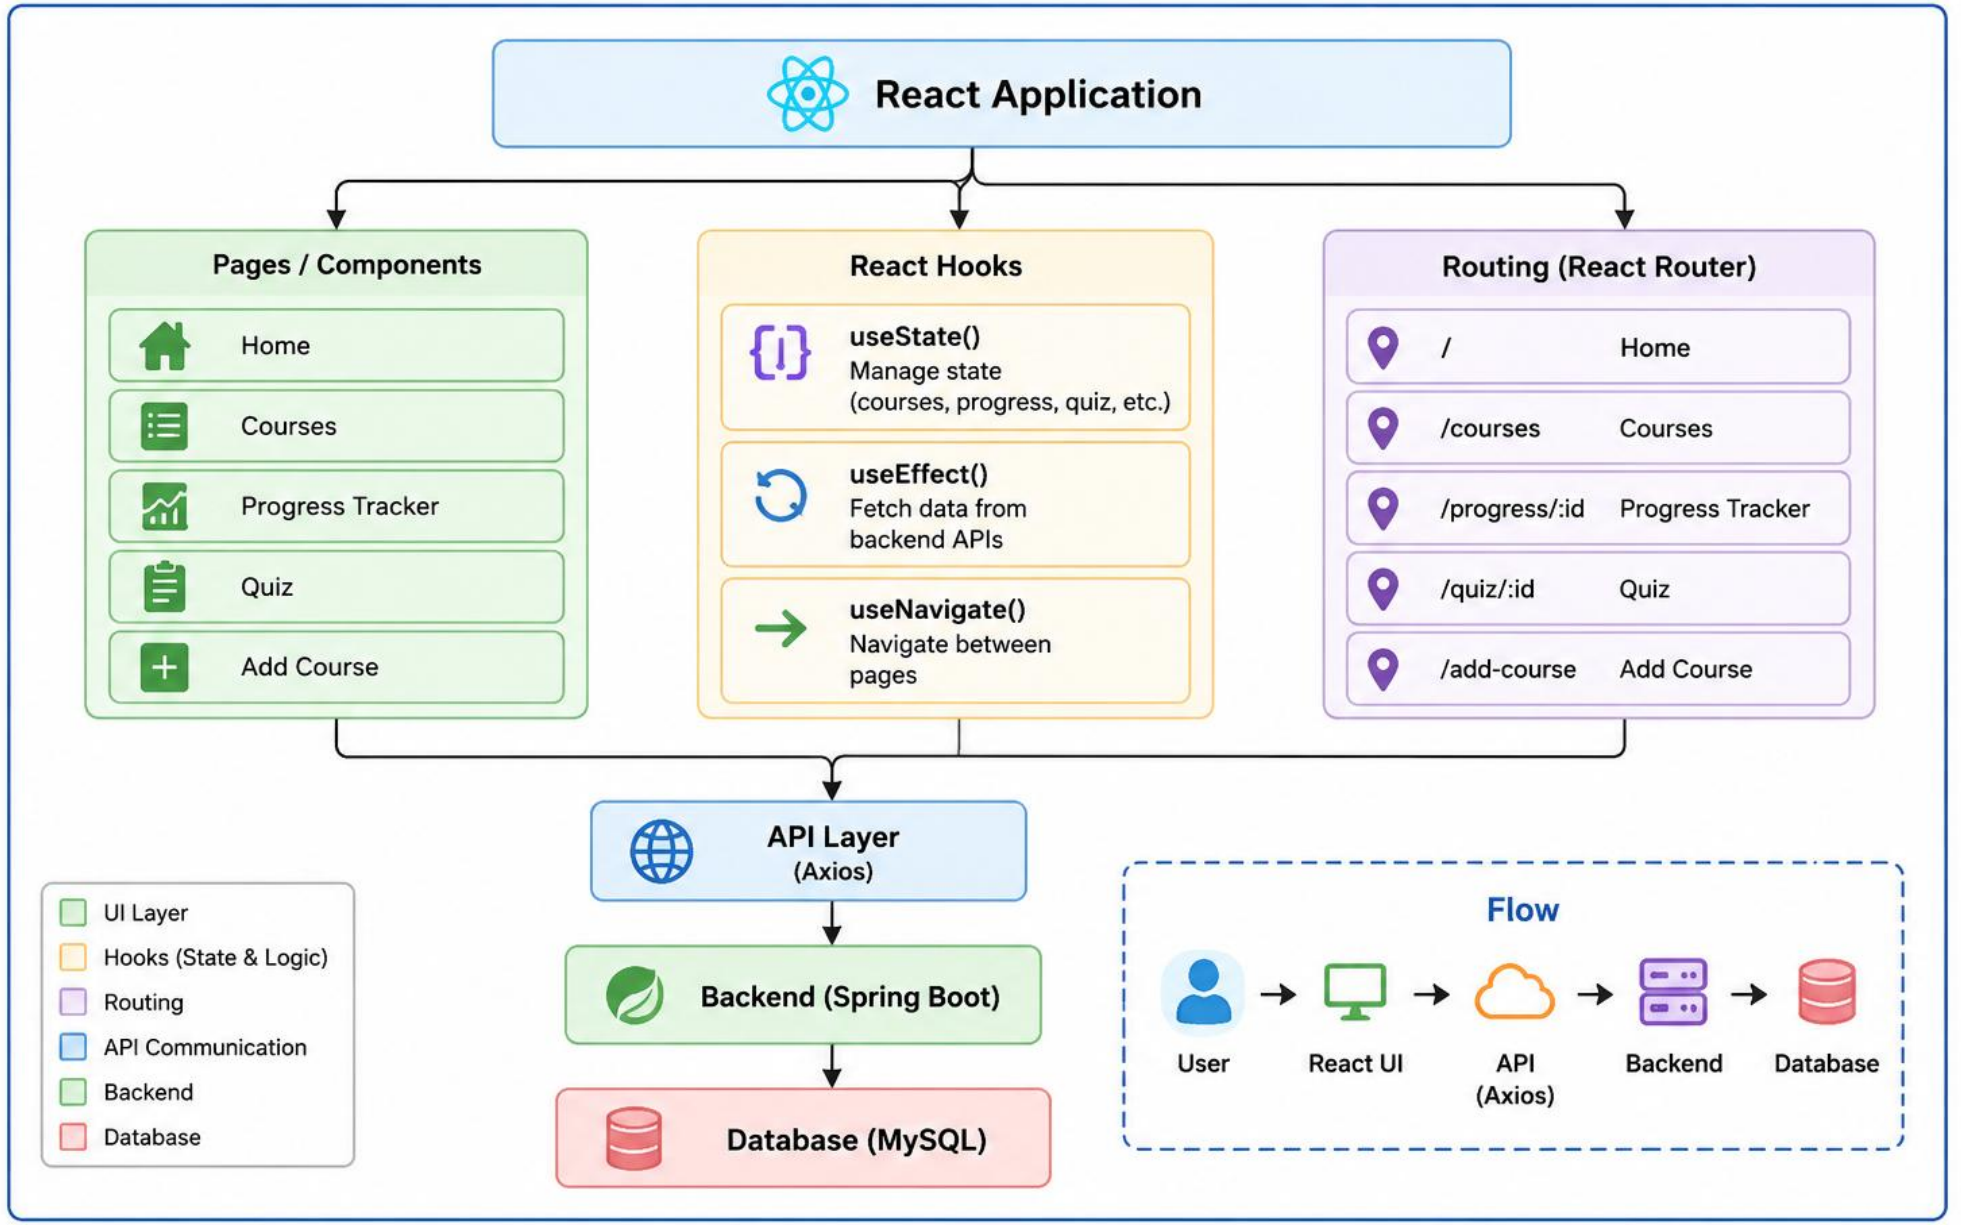

REVIEW 1 RECAP

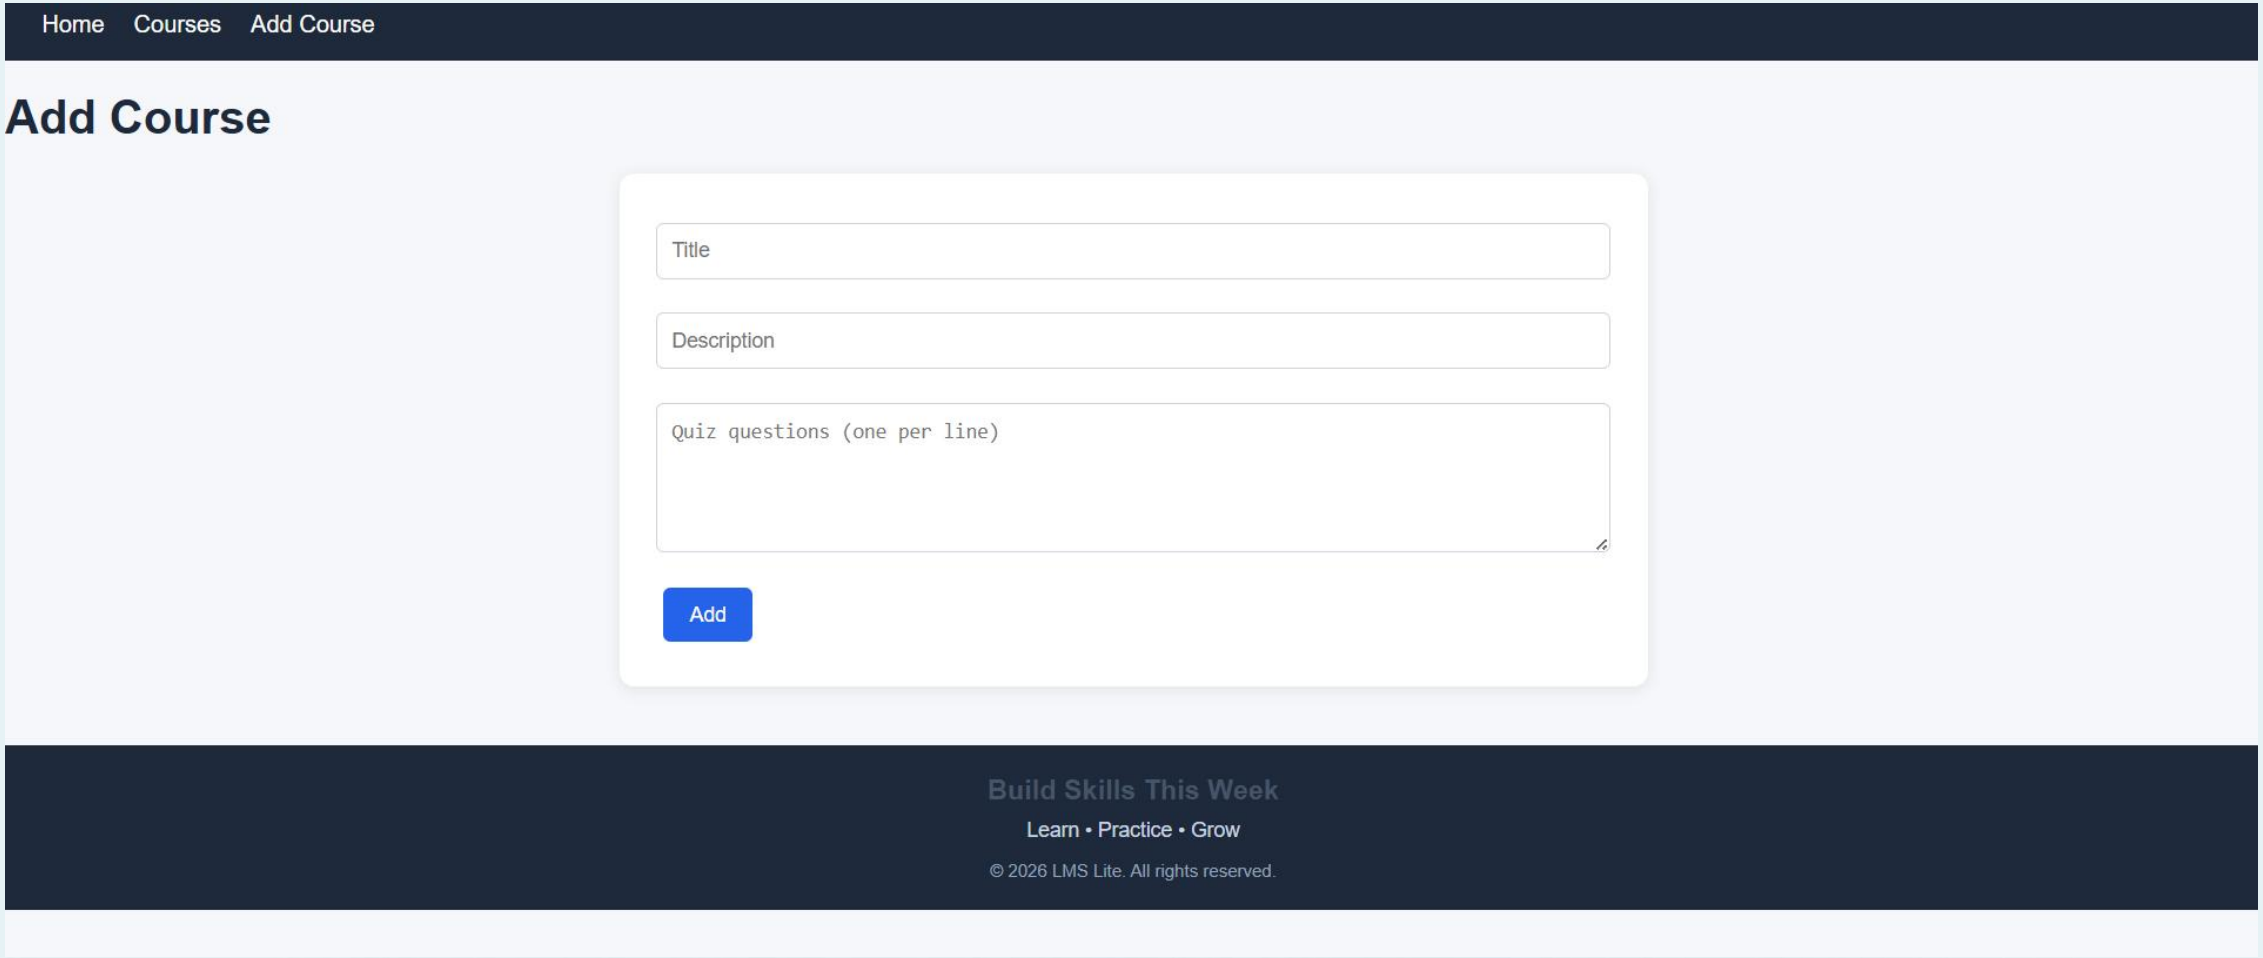

TECHNOLOGY STACK

React.js	Build the user interface
JavaScript	Application logic
HTML5 & CSS3	Structure and styling
React Router	Page navigation
Axios	Communication with backend REST APIs
React Hooks	useState, useEffect, useNavigate

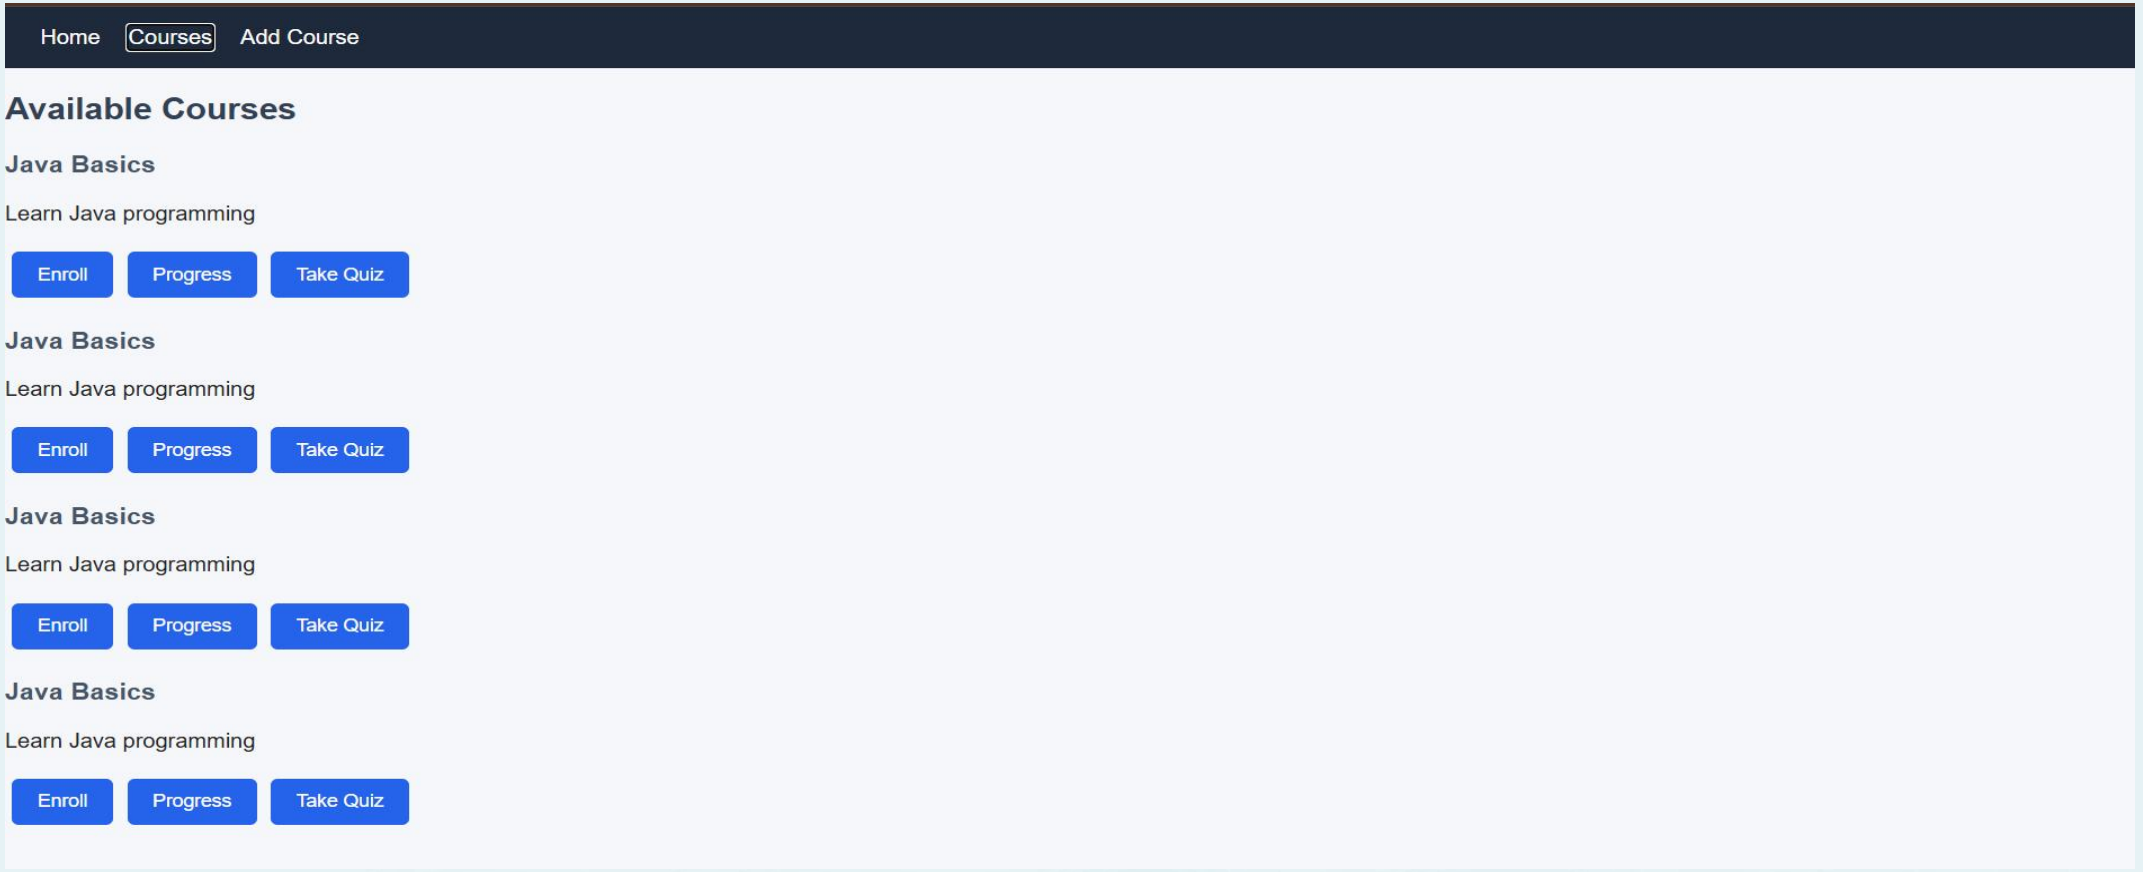

LMS LITE – FRONTEND ARCHITECTURE

ADDING A COURSE

LIST OF COURSES

CONCLUSION

- Developed a simple Learning Management System (LMS).
- Users can view and add courses.
- Users can enroll in courses and track progress.
- Users can attend quizzes and view scores.
- React is used for the frontend.
- Spring Boot and MySQL are used for backend and data storage.
- The project makes course management simple and easy.
